
About:

Our project shows data of ODI's of players from different countries and contains authentication of users and Admin.

WORKING:

- First, run the “cricket.sql” file in mysql workbench and create new database and then save it as “cricket”
- Then, copy folder “Cricstats” into the server location directory (for linux : var/www/html , for windows : xampp/htdocs/)
- Then, open the url for this folder using a local server and the project will be open.(for linux :
<https://localhost/Cricstats/index.html> , for windows :
<https://localhost/xampp/htdocs/Cricstats/index.html>)

ER Diagram :

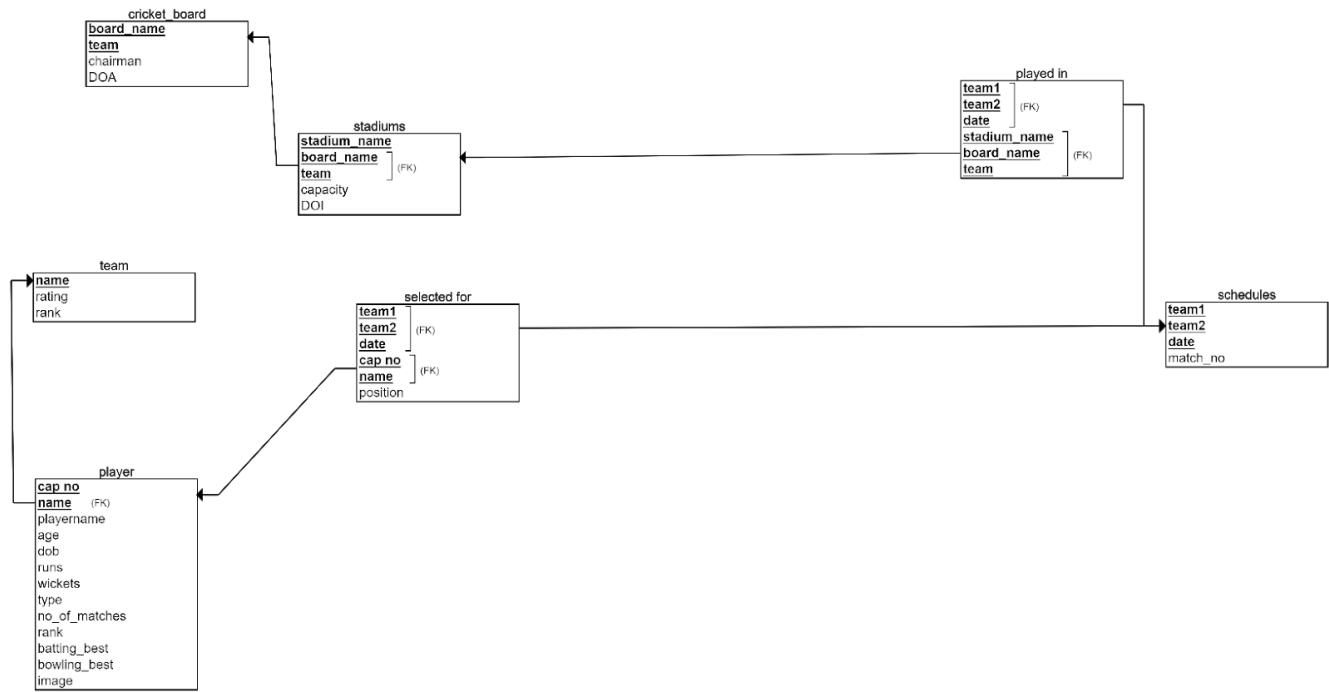

This ER Diagram contains 5 entities:

- Players
- Teams
- Schedules
- Stadiums
- Cricket boards

Each Entity contains further attributes regarding the data available and these entities are connected with different relationships like one to many , many to

many and many to one .

Relational Diagram :

Technologies Used:

Technologies used are: HTML, CSS , Bootstrap 4,php, JavaScript, mysqli

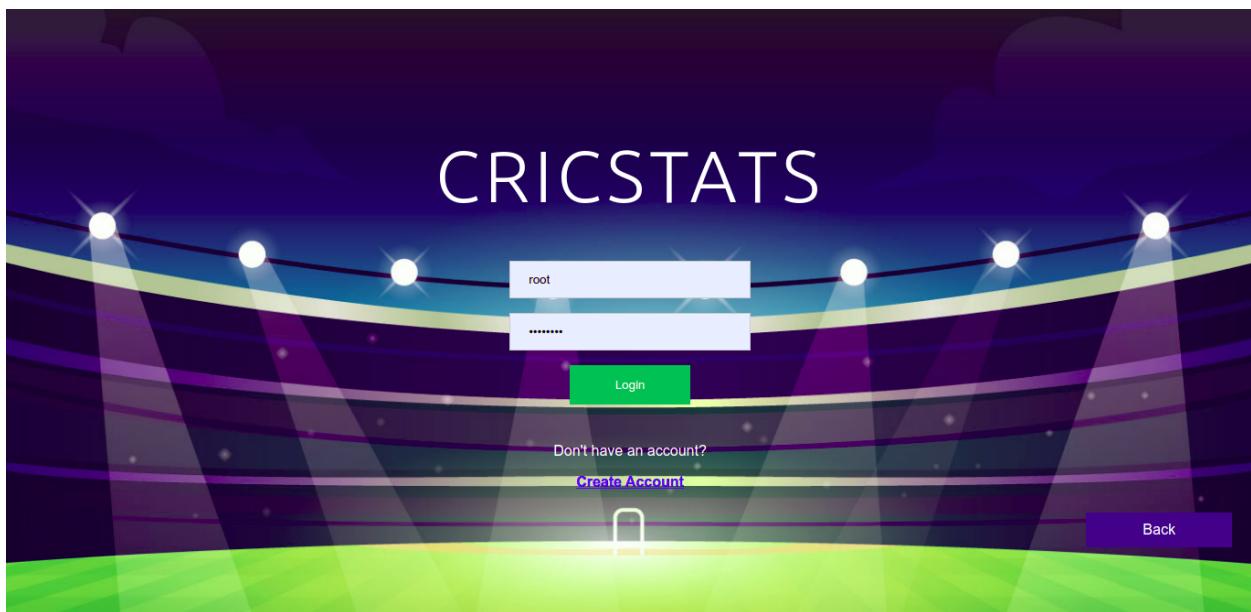

For DATABASE: Mysql, Mysql Workbench, Xampp

CRICSTATS DATABASE:

The screenshot shows the MySQL Workbench interface with the 'admin' table selected. The table structure includes columns for 'username' and 'password'. The data contains five rows with the following values:

	username	password
1	amit	201951021
2	dummy	password
3	shreyansh	201951147
4	suryansh	201951158
5	vishal	201951170
6	yatharth	201952241

Below the table, there are buttons for 'Edit', 'Copy', 'Delete', 'Check all', and 'With selected:'. At the bottom, there are links for 'Print', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'.
